

How to Update the APBnet Software

January 2, 2015

- The latest version of all APBnet documents will always be at www.APBnet.net/APBnet-Documents
- To access our software download site, contact support@APBnet.net for the URL and logon credentials.

Updating a Desktop Installation (for when the software is installed on the desktop computer):

1. Logon to Windows with the credentials of the person assigned the specific APBnet User Number
2. Exit APBnet if it is currently running
3. Download and run the APBnet setup off of the download site

Updating a Server Installation (for when the software is installed in a shared folder on a server)

1. Do the Desktop Update shown above
2. Copy the 'Versionyymmdd' folder of your desktop update to the server's shared folder. The versionyymmdd folder is located in your 'MyDocuments\CriticalReachAPBnetFiles\' folder on the desktop computer.
3. Change the 'yymmdd' in the .bat file in the shared folder to match the yymmdd of the new versionyyymmdd folder.
4. The *ServerDeployment.pdf* document at www.APBnet.net/APBnet-Documents can be used to refresh your memory about your APBnet server deployment.
